Overview

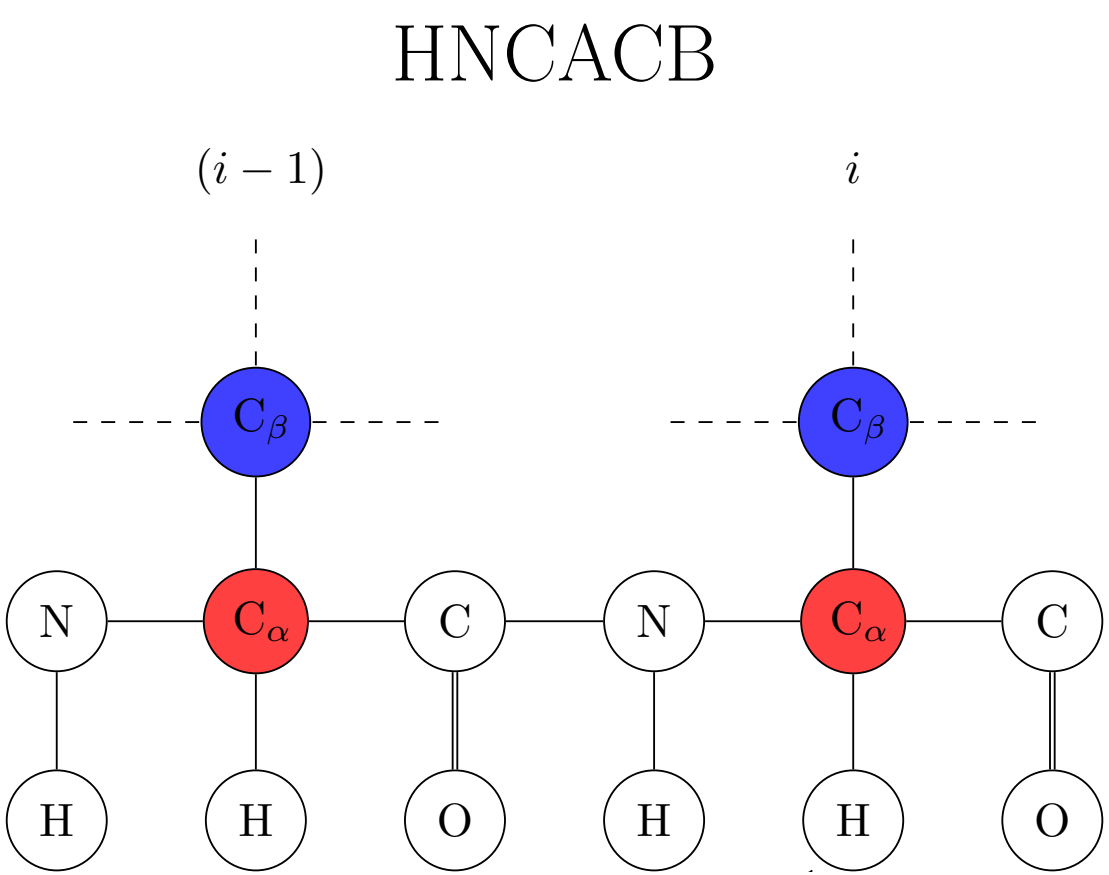
Motivation

- Nuclear Magnetic Resonance Spectroscopy
  - Gain knowledge about protein structure
  - Study how mutations lead to diseases
- Problems
  - Generates large amounts of data
  - Data analysis is slow and error prone
- Goal
  - Automate the assignment process
  - Decrease human error
  - Increase productivity

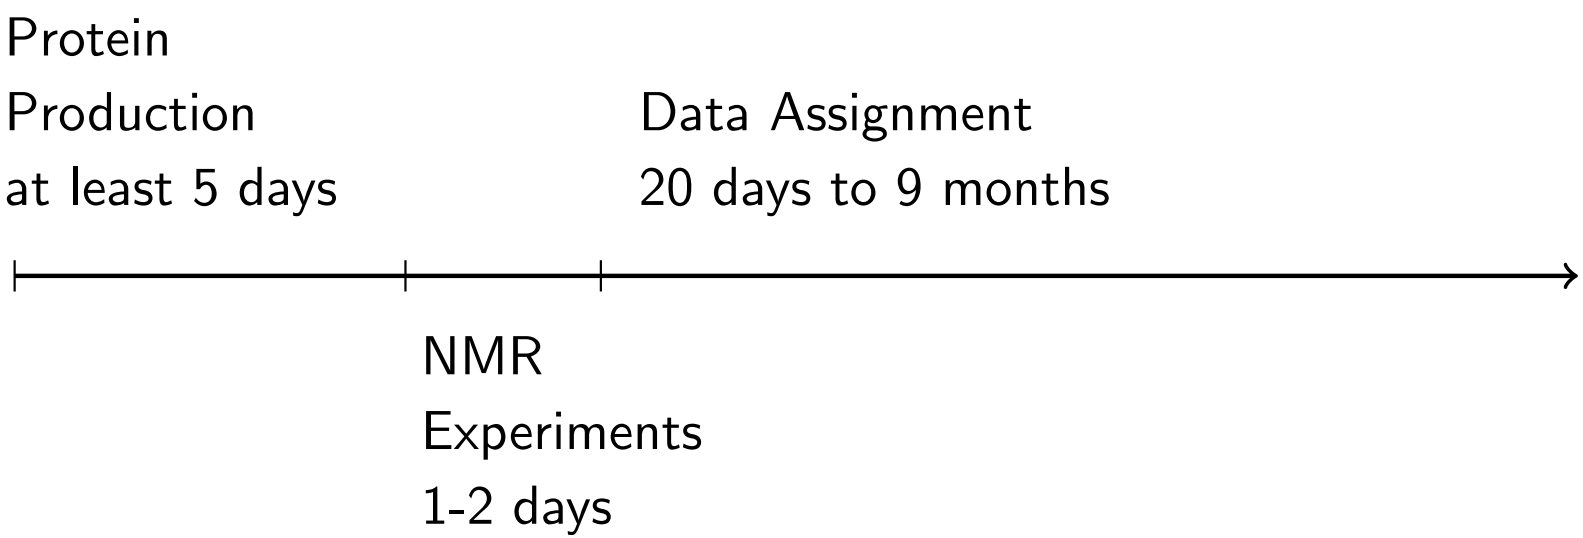
Nuclear Magnetic Resonance (NMR)

- Used to obtain structural information
  - Chemical shift values
- HNCACB experiment
  - Generates C_α and C_β residue i and $i-1$
- CBCA(CO) NH experiment
  - Generates C_α and C_β for residue i
  - Confirms residue data

Chemical Shift Values



Time Line



Protein
Production
at least 5 days
Data Assignment
20 days to 9 months
NMR
Experiments
1-2 days

[1]

Manual Methods

- Most time consuming part
- Prone to human error
- Missing and ambiguous data forces chunks to be skipped

Initialization

- Input
  - Expected amino acid sequence
    - Covered to expectation chemical shift values
    - Stored as the protein chain
  - NMR chemical shift data
    - C_α and C_β for residue i and $i-1$
    - Stored in a tile
- Missing data
  - Place holder tile generation
- Grouping

Starting the assignment

Tiles to assign: $\begin{matrix}13\\9\end{matrix}$ $\begin{matrix}11\\13\end{matrix}$ $\begin{matrix}9\\12\end{matrix}$

Protein Chain	**Tiles**		
11.5	$\begin{matrix}13\\9\end{matrix}$ 1.5	$\begin{matrix}11\\13\end{matrix}$ 0.5	$\begin{matrix}9\\12\end{matrix}$ 2.5
12.5			
9.6			

Cost Calculation

- Accuracy matching the protein chain residue
- Accuracy matching the tile above current tile
- Cost of all tiles place before current tile

Generating child nodes

Tiles to assign: $\begin{matrix}13\\9\end{matrix}$ $\begin{matrix}11\\13\end{matrix}$ $\begin{matrix}9\\12\end{matrix}$

Protein Chain	**Tiles**					
11.5	$\begin{matrix}13\\9\end{matrix}$	1.5	$\begin{matrix}11\\13\end{matrix}$	0.5	$\begin{matrix}9\\12\end{matrix}$	2.5
12.5						
9.6

Goal State

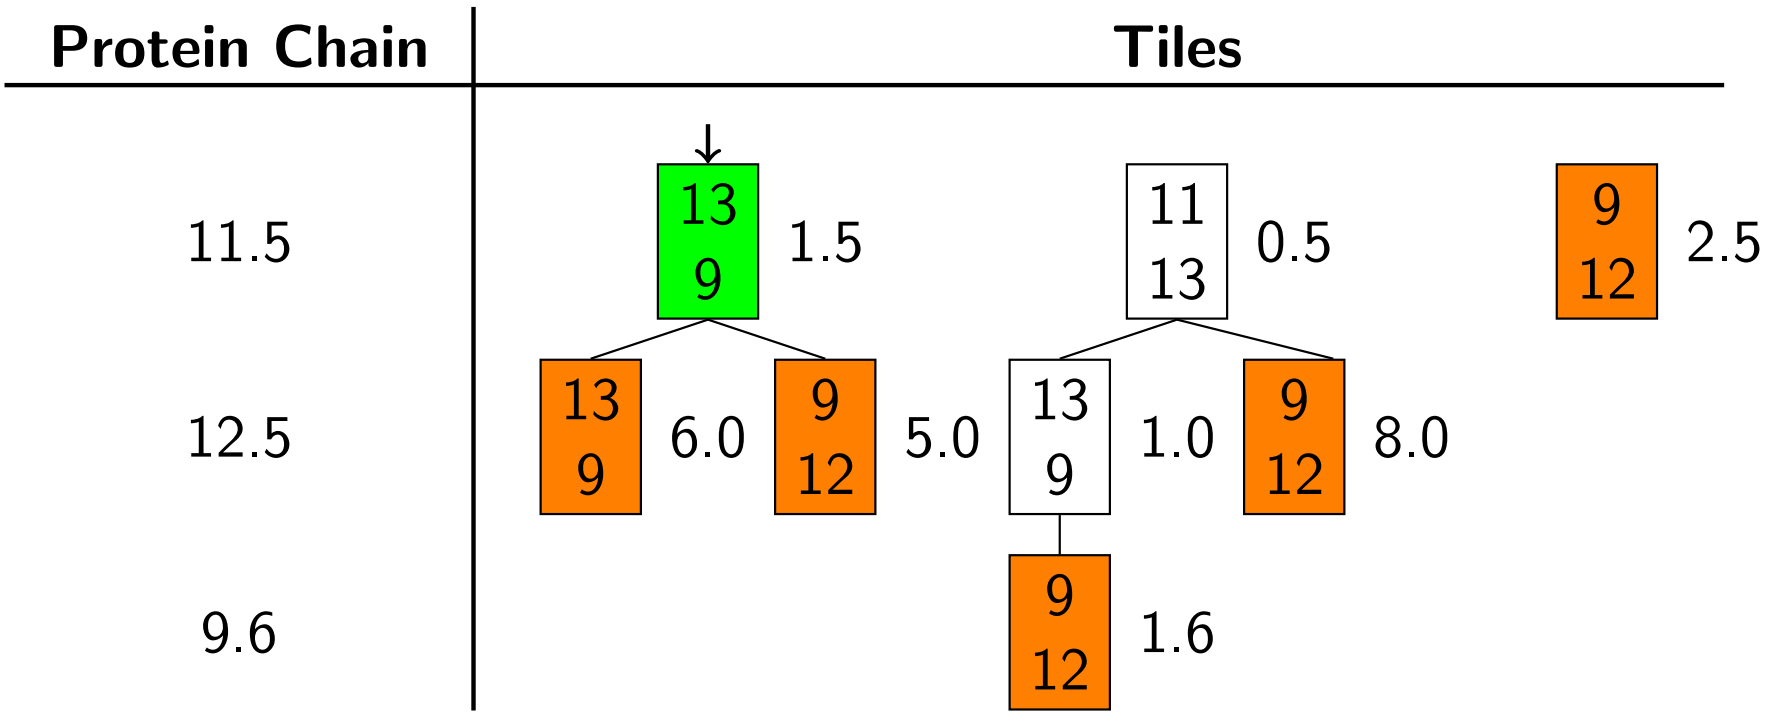
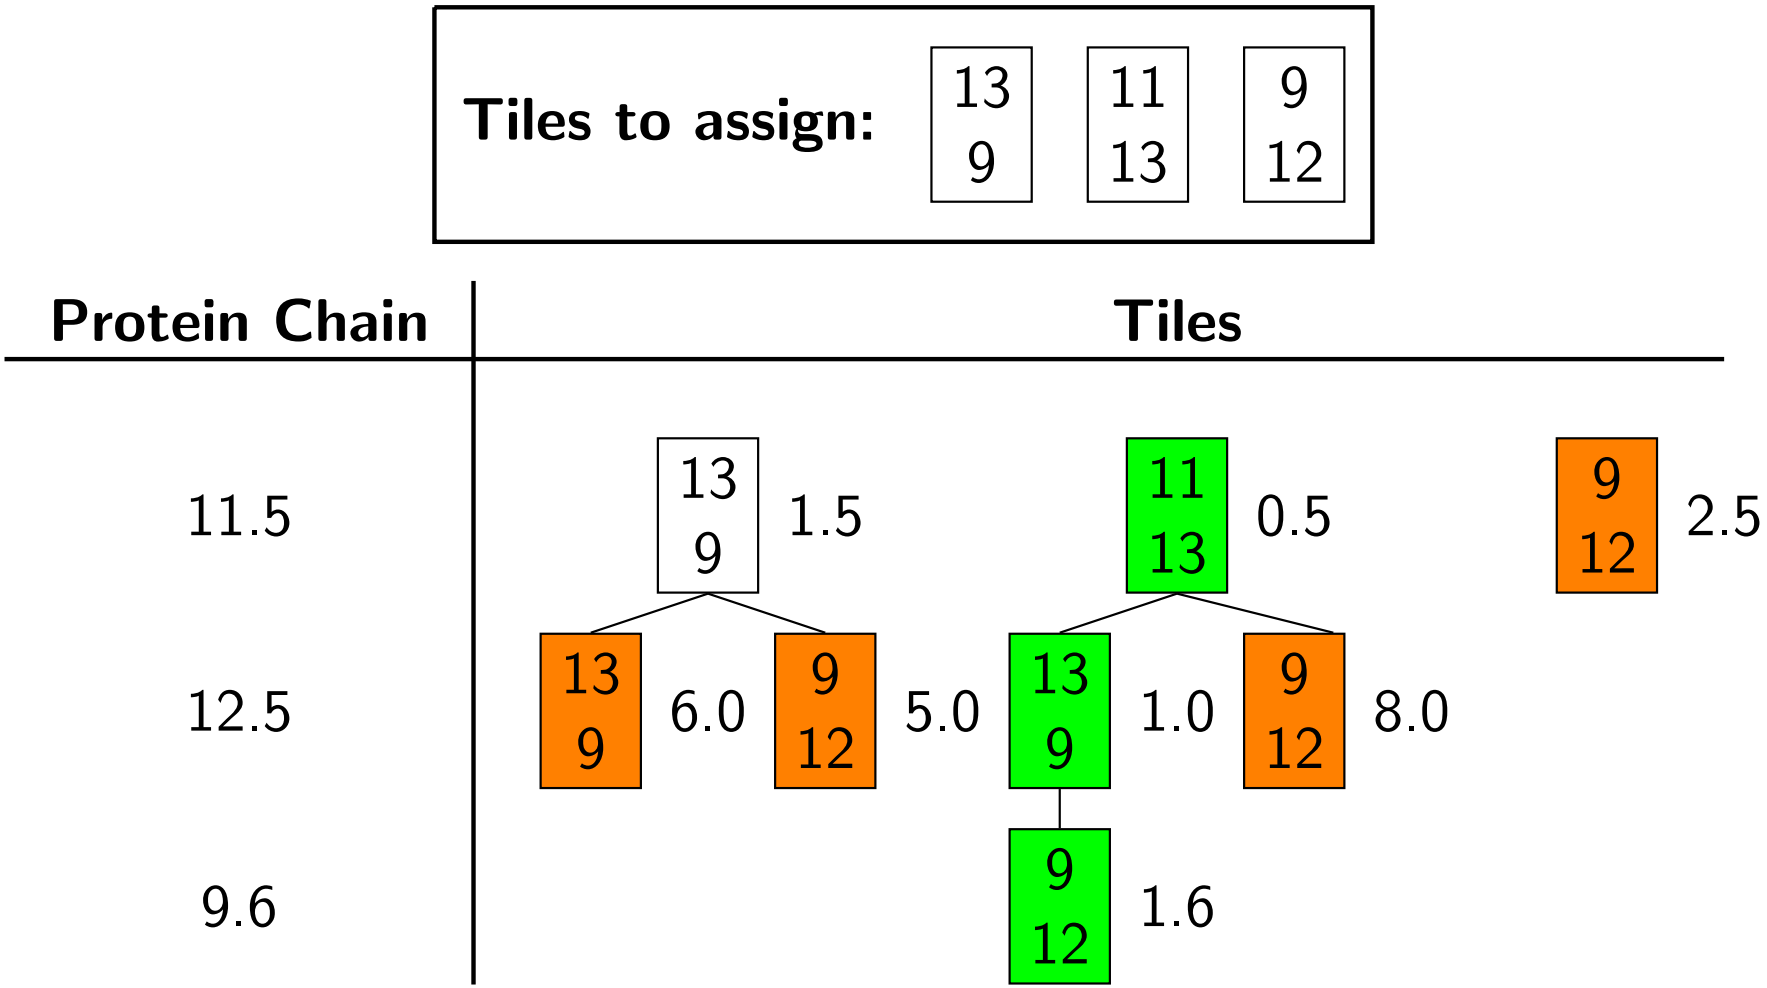
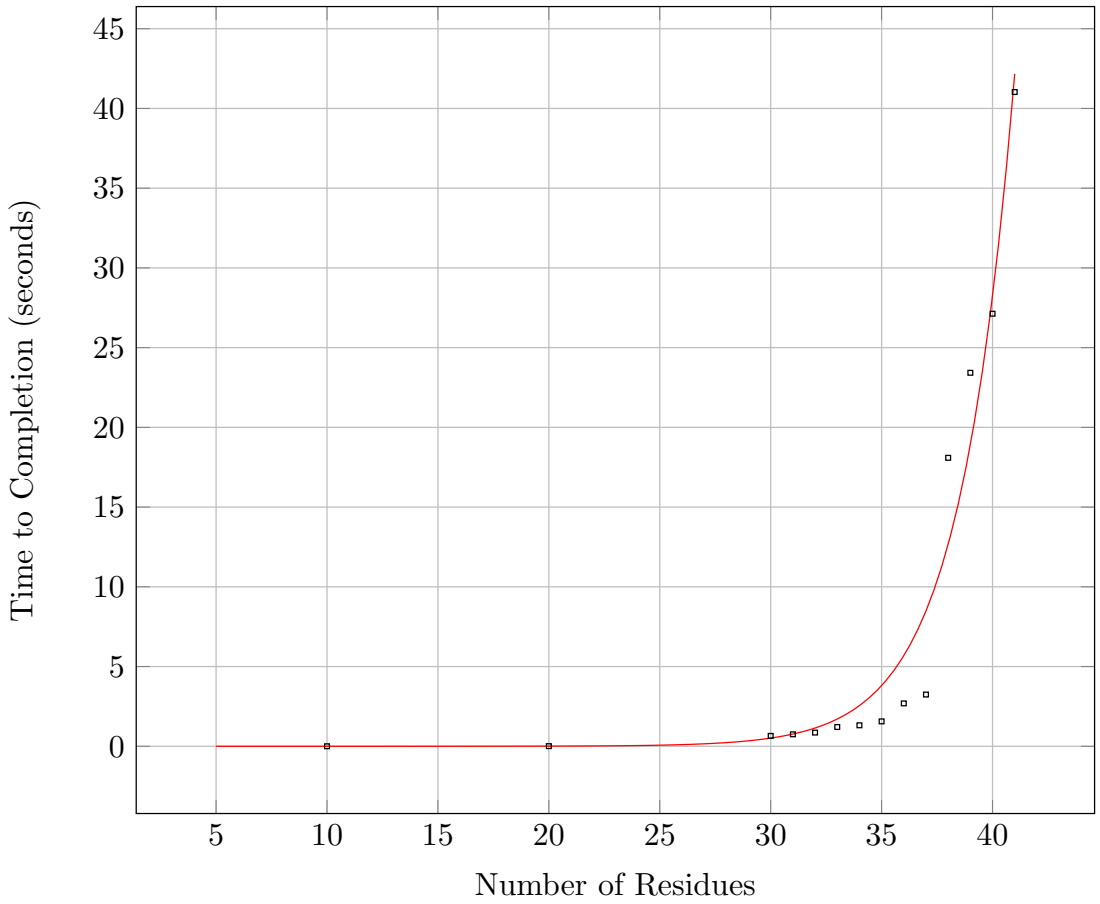
Tiles to assign: 13/9 | 11/13 | 9/12



Solution State



Time of Assignment



Future Goals

- Parallelization
  - Decrease assignment time
  - Allow for larger data sets
- Machine learning
  - Increase accuracy of assignment
  - Optimize cost calculation

Acknowledgments

- Dr. Tim Urness (Mathematics and Computer Science)
- Dr. Adina Kilpatrick (Physic)
- Rachel Davis (research colleague)
- John Emmons (research colleague)
- Katherine Roth (research colleague)
- David Mascharka (research colleague)
- Leah Robison (research colleague)
